Web Programming Project

Create a fully functional, professional website using HTML, Bootstrap CSS for...

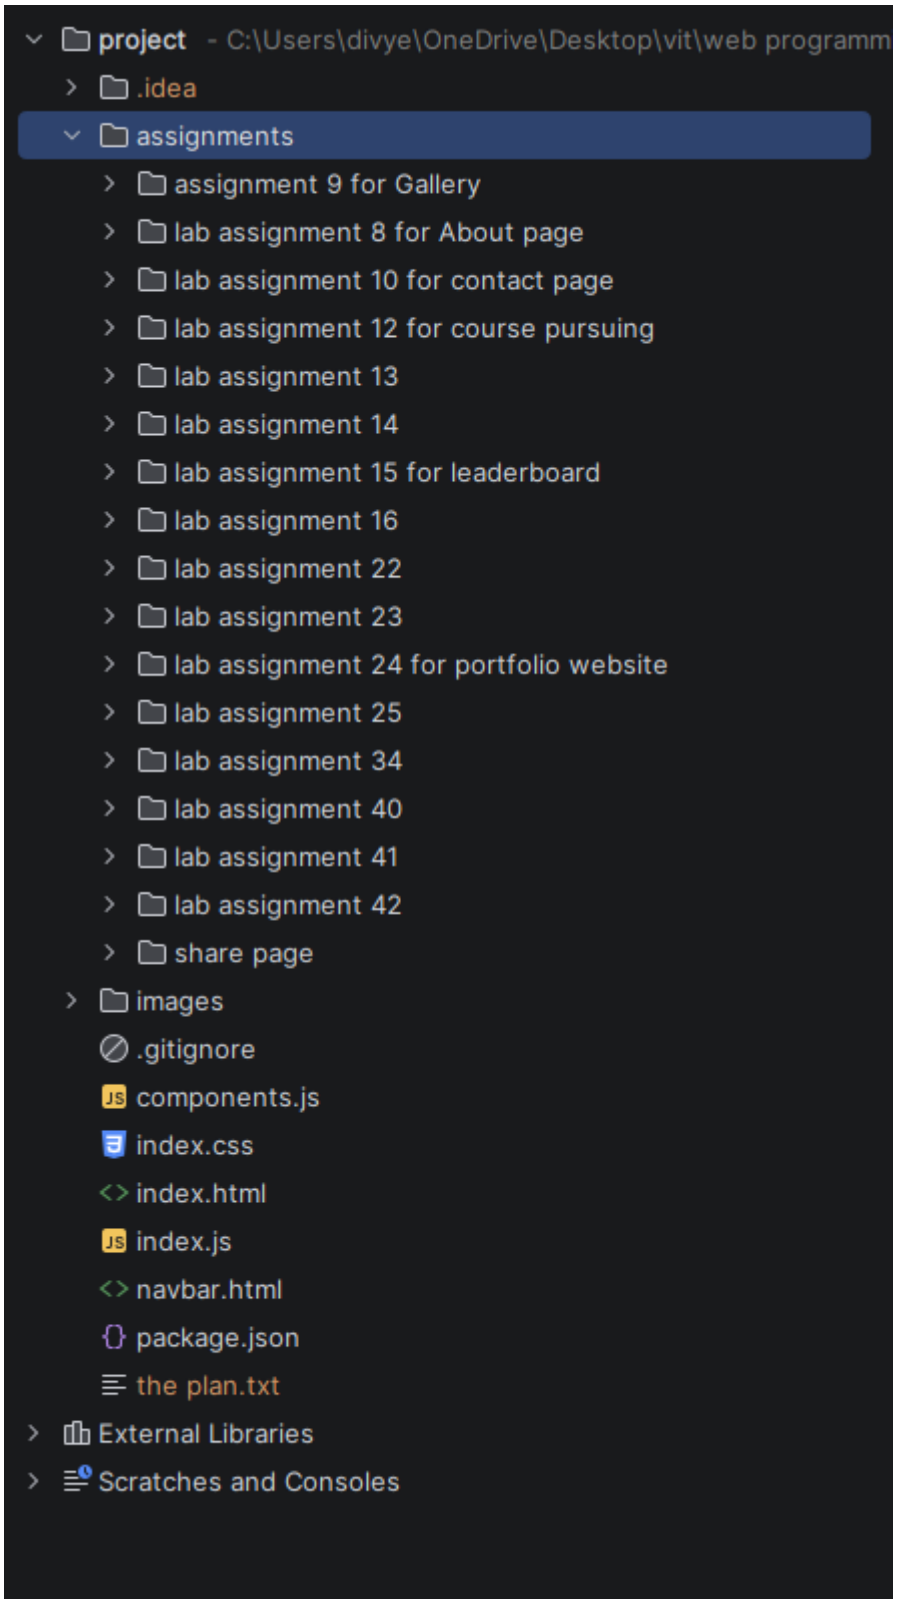
Submit this in VTOP

Project 1: Create a fully functional, professional website using HTML, Bootstrap CSS for responsive design, and JavaScript for interactive features. Integrate all the Moodle tasks you've completed so far into a cohesive 3-page website site with smooth navigation via a dropdown menu. Host the website in Github and submit the link too.

You can submit the pdf file containing coding screenshot

Add submission

File Hierarchy:



Code:

index.html × | components.js | navbar.html | index.css

```html

</nav>
```

index.html | components.js | navbar.html | index.css

```css
body {
    background-color: #f8f9fa;
}
.share-card {
    max-width: 400px;
    border-radius: 16px;
}
.social-btn {
    width: 45px;
    height: 45px;
    border-radius: 50%;
    display: inline-flex;
    align-items: center;   qburi, 48 minutes ago • Add share page assignment
    justify-content: center;
    font-size: 1.2rem;
    transition: transform 0.2s;
}
.social-btn:hover {
    transform: scale(1.1);
}
.btn-whatsapp { background-color: #25D366; color: white; }
.btn-twitter { background-color: #1DA1F2; color: white; }
.btn-linkedin { background-color: #0077B5; color: white; }
```

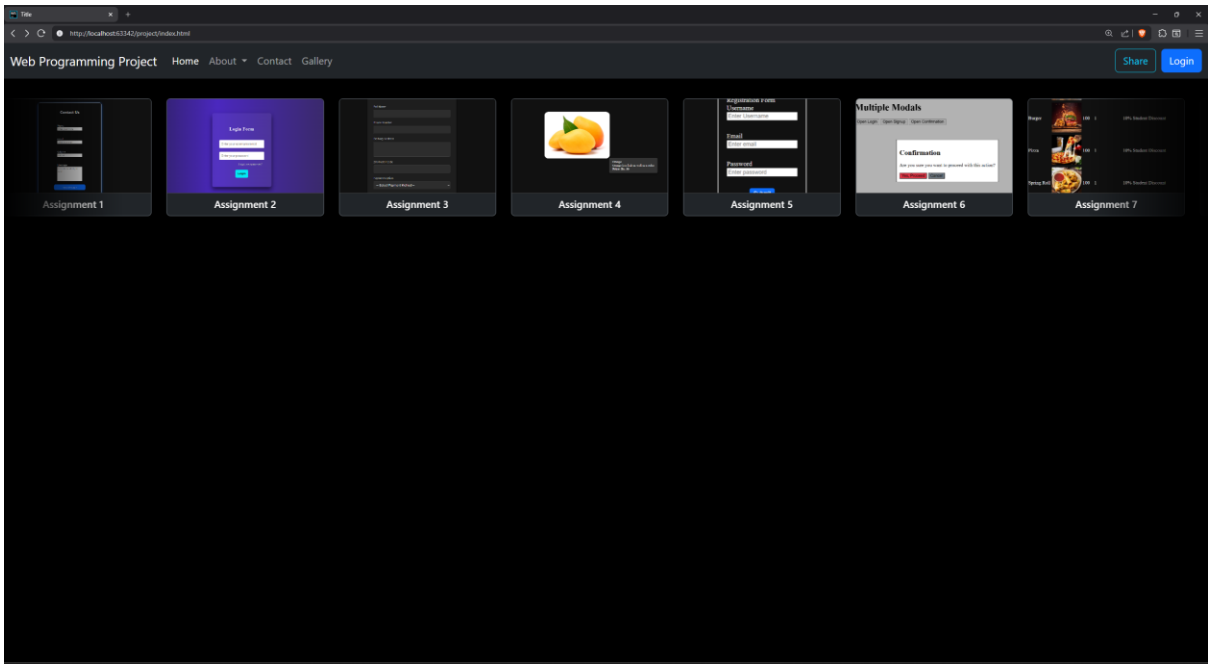
index.html | components.js | navbar.html | index.css

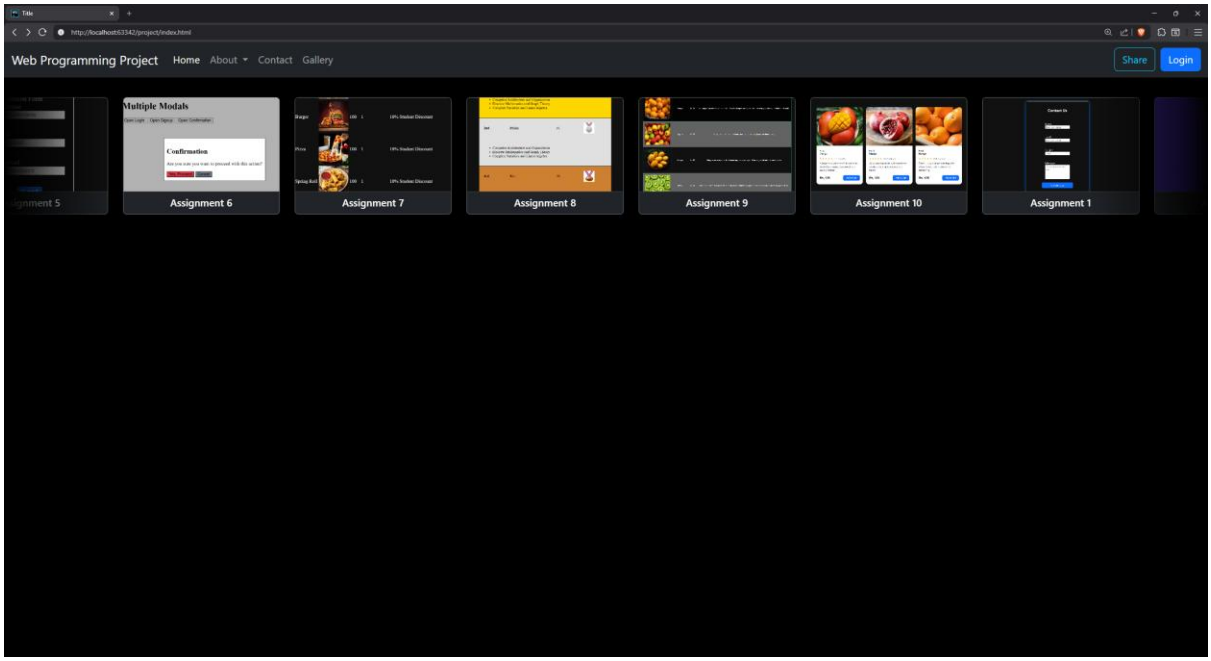
```javascript
document.addEventListener( type: "DOMContentLoaded", listener: () : void => {
    const placeholder : HTMLElement = document.getElementById( elementId: "navbar-placeholder");

    // Get the base path we set in the HTML, default to "." if missing
    const basePath : string = placeholder.getAttribute( qualifiedName: "data-basepath") || ".";

    // Fetch the navbar relative to the current file's depth
    fetch( input: `${basePath}/navbar.html`) Promise<Response>
        .then(response : Response => {
            if (!response.ok) throw new Error("Failed to fetch navbar");
            return response.text();
        }) Promise<string>
        .then(htmlData : string => {
            // Find every instance of %BASE% in the navbar and replace it with the correct relative path
            const updatedHtml : string = htmlData.replace( searchValue: /%BASE%/g, basePath);
            placeholder.innerHTML = updatedHtml;
        }) Promise<void>
        .catch(error => console.error("Error loading navbar:", error));
});   qburi, Moments ago • Finish the project
```

Output:





There is an assignment carousel that showcases 10 logic-heavy assignments that I've completed during this course.
